

Another successful year for Redifon at the Brno Fair

REDIFON COMPUTERS LTD. had another successful year at the Brno Fair, held in Brno, Czechoslovakia in September 1978. The new R-range of computers was announced for the first time in the country and orders worth over £400,000 were taken.

Redifon's drive to increase sales in Slovakia, the eastern part of the country, was rewarded by two orders for R300 systems for State Forestry Company in Zilina and the State Savings Bank in Bratislava. Other orders were for a fifth system for the Czech Savings Bank, and an R300 system for the Knitted Clothing Industry in Pisek and an R100 for the Chemical Research Institute (VUTECHP) in Prague.

Deliveries of Redifon equipment to Czechoslovakia during the month of September 1978 broke all records for the company. Nearly £1,000,000 worth of equipment was delivered, including three of the systems

The Museum of Communist Party History, Brno, Czechoslovakia.

mentioned above, that were signed only a week before. A special charter aircraft was used to ship the equipment from Gatwick Airport direct to Prague.

Redifon was the first

British company to gain official recognition in Czechoslovakia and allowed to set up a commercial office. The company believes that this fact, together with the consistently high level of its

technical services, is partly responsible for its recent successes.

Czech State Insurance order 7th Redifon System

THE Czech State Insurance has ordered three R100 systems to be installed in Plzen, Pardubice and Ceske Budejovice. This makes the State Insurance organisation one of Czechoslovakia's largest Redifon users with a total of seven systems.

Clean data will be prepared on new insurance policies for processing on a Siemens mainframe in the Prague Computer Centre. The systems which are installed in six provincial centres and in the capital, Prague, will also be used for the local printing of 'giro' slips for payment of insurance claims. Eventually Redifon telecommunications will link the six systems to the Prague centre.

Configuration: 24 terminals, 3 central processors with 5MB disks and 3 line printers.

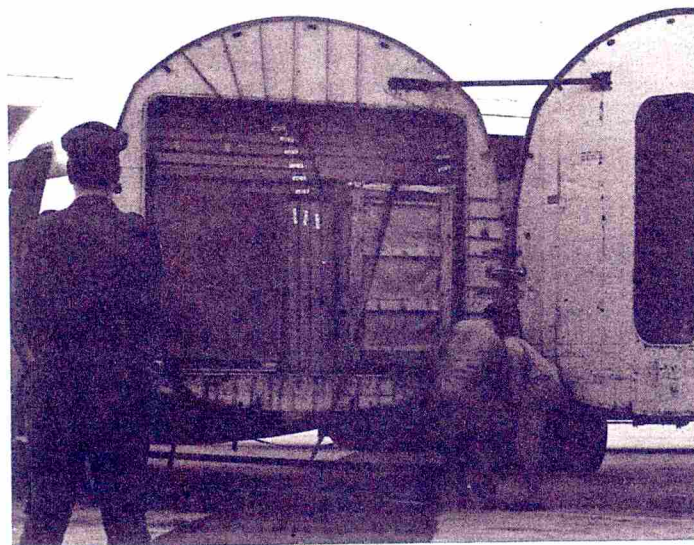

Contract value: £210,000.

Supro order R850

THE sixth R-range system in Czechoslovakia has been ordered by Supro, which is the research institute for systems and programming design attached to the Czechoslovakian Ministry of Light Industry in Prague. This is the 24th Redifon system to be installed in various organisations which are under the aegis of this Ministry.

The configuration for the R850 system includes 33MB disk, eight keystations, line printer and card reader. The system will act as a data base for the Ministry and data preparation applications include payroll, stock control and invoicing.

Contract value: £101,000.

Pictured above, the arrival of the Argosy aircraft at Prague Airport, which was chartered from Air Bridge Carriers Ltd., of Castle Donnington, by Redifon Computers Ltd. The aircraft was loaded with R-range equipment for delivery to VZKG [four R830's]; Savings Bank, Plzen [one R300]; Supro [one R850] and Bastro [one R850].
